

ABID CASE #16 Case Study by Jim Perkins MD (©, 2009)

History: This patient was a 50 year old woman admitted for resection of lung cancer. She had been transfused 14 weeks earlier.

ABO and Rh Typing

<A	<B	A1 cells	B cells	6% alb	<D	<D/AHG	CCC	Interp
0	0	4+	4+		0			

Antibody Screen

	IS	37°, 30'	AHG	CCC
OI	0	0	w+	2+
OII	0	0	w+	2+
OIII	0	0	w+	2+

Direct Antiglobulin Test

	Poly	IgG	<C3
AHG	vw+	vw+	0
CCC	2+	2+

ABID CASE #16

1. What is the identity of this antibody? What are the possibilities when all cells in the initial panel are reactive?

2. Is any further workup needed to prove it? Are other antibodies ruled out as required by our procedure manual?

3. Is this an example of primary or secondary immunization?

4. Does this antibody cause hemolytic transfusion reactions? Hemolytic disease of the newborn?

5. How would we select compatible blood for this patient? What percentage of donors is expected to be compatible with this recipient?

6. What is the biochemical nature of the antigen? What are the genetics? (Include a discussion of DTT and ficin)
